

Border

Field of application:

Paddocks, riding arenas, car parks, yard consolidation.

Description:

The edging is easy to lay, can be cut to size and results in an almost closed surface without gaps between the individual elements. It is fastened to the ground by means of ground nails driven through the fold of the edging. The border visually limits the riding surface on the one hand and prevents the footing from moving away on the other. Due to the softer material and the rounded edges, the risk of injury for horses and riders is reduced.

Properties:

Insensitive to chemicals and UV radiation, easy to install, robust, durable, can be cut to size

FG Kunststoffmatten GmbH
Hannoversche Straße 23
